

## 1. Pen portrait for a user of a driverless car

Amaka strides out of her Lagos apartment building, a whirlwind of efficiency. Today's a tight schedule, and the usual traffic chaos is a non-factor. With a tap on her phone, she summons her ride - a sleek, self-driving pod. It hums curbside, a beacon of stress-free travel. Amaka slides in, the plush interior a stark contrast to the bustling street. She plugs in her work tablet, catching up on emails as the city glides by. Gone are the days of impatient drumming on the steering wheel. Now, Amaka uses the commute to strategize for her upcoming presentation, a calm focus etched on her face. The car anticipates a detour due to an accident, silently rerouting and informing Amaka with a gentle chime. A flicker of surprise crosses her features - she almost forgot the human element of traffic entirely. Reaching her destination, Amaka steps out, refreshed and prepared, the city's energy a counterpoint to her inner serenity. Driverless cars aren't a luxury for Amaka, they're a time machine, a gift of precious moments in a world that demands every second.

## 2. Use Case Model for a Driverless car
